Nov: 12th

Looking out side the Form room, we saw a sweet little Field mouse, in a clearing in the undergrowth. It found something to eat - we could not see what - and then sat up ~~as~~ ~~it~~ and nibbled it, & when it had finished, it darted away.

Nov: 15th

The stormy weather we have been experiencing lately, has made a great difference to the trees, and many of them are standing gaunt and bare, whilst the ground is covered with dead leaves. Nearly all the bird emigrants have now flown

Nov: 16th

As we were going up to the works this morning, a little grey squirrel ran - quite slowly - across the Monks' Path, and disappeared up a tree.

P53CMC60

Nov: 22nd The Stinking Iris, or Faetid Iris, is not very common, and is usually found in East Kent. It appears to like the chalky soil, and grows in great clumps, in the undergrowth in woody places. The Flower is mauve, and the berries are a bright orange

Nov: 26th Looking out of the Form-room window, this morning, we saw a bird which looked rather like a blue-tit, on one of the trees outside. He was standing with his feet dug into the bark, and appeared to be pecking at the bark; he was the same shape as a blue-tit, but he had not the same bright colouring. We think it may have been a coal-tit.

Dec: 3rd

Looking out of the dining-room window, during lunch, we saw a lovely

SPRING

1935

TERM

Januar

Janua

Spring Term 1934January 23rd

Today we went a very interesting nature-walk. The weather was mild and sunny. We found several flowers, and the leaves of Cuckoo-pint. We saw something moving about in a mass of weed, on the lake, it looked as if a bird had somehow got caught. We threw a stick into the water, and the creature dived, and did not re-appear. Coming back we found an ash tree that was still laden with last year's fruit. We also found some fungus.

January 28th

On Saturday we had a Field-club outing. The weather was very cold, and it was snowing hard, so we did not find as much as last time. Just before we reached the Billing gate,

we saw a tree that had been blown down, the night before. In its fall, it had brought with it the greater part of another tree.

We found quite a lot of fungi, and some mosses. We also found several ~~twigs~~ different kinds of twigs, and the flowers of red dead nettle, barren strawberry, ordinary strawberry and blackberry. We went down into a little dell near, the trespassing woods, out of which flew a great many long-tailed tits

Feb 1st
Jan

Yesterday we went to Bedford, from the bus, we saw quite a lot of birds, including, a heron, a blackbird, a dabchick and others.

Feb 11th

Looking out of our dormitory window this morning, we saw

two beautiful wild swans, Flying over
the lake.

Feb: 12th.

Today we went a Nature-walk.
We went past the Billing Gate, and went
over the tree, that is blown down, there.
We saw that a great many roots were
rotten. We saw some beautiful examples
of medullary rays. We went down the Billing
Track, we noticed that all the trees were
covered with a sort of corky growth.
We found lots of twigs, and got some
very good specimens of willow. We also
saw several new ~~to~~ birds.

March: 12th:

Last week we went a
very interesting nature walk, right round the
Lake. We saw several birds, and some
last years nest, but no new ones. On the
way back we found a very good
skeleton of a Fish, which we brought back

for Nature painting.

Written in March

The cock is crowing,
The stream is flowing,
The small birds twitter,
The lake doth gliter,
The green field sleeps in the sun;
The oldest and youngest
Are at work with the strongest;
The cattle are grazing,
Their heads never raising;
There are forty feeding like one.

Like an army defeated
The snow hath retreated
And now doth fare ill
On the top of the bare hill;
The ploughboy is whooping - anon - anon;
There's joy in the mountains;
There's life in the fountains;
Small clouds are sailing,
Blue sky prevailing;
The rain is over and gone

Summer Term 1935Song on May Morning

Now the bright morning star, Day's harbinger,
Comes dancing from the east, and leads with her
The flowery May, who from her green lap throws
The yellow cowslip and the pale primrose.

Hail, bounteous May, that does inspire
Mirth, and youth, and warm desire!

Woods and groves are of thy dressing;
Hill and dale doth boast thy blessing.

Thus we salute thee with our early song,
And welcome thee, and wish thee long.

John Milton

P75CHC60

June 1st

Today we went for a field-club expedition. We went to a place called Great Doddington. There was a little stream, with fields on either side. We found many new flowers, including cow-leaved geranium, Tormentil, Thyme-leaved speedwell, and many others.

We saw two Great Tits flying about, the overhanging willows, they were both carrying food, and seemed very disturbed by our watching them. We also saw a reed bunting. We caught various "bugs" including Alder flies, a white slug, and a scorpion. The weather was perfect for watching nature, and we had a very enjoyable afternoon.

June 10th

Today we went for a Nature walk. The ground was very wet, as it had been raining. We went by the two lakes, and through the wood at the back, coming out near the Sywell gate. We found in the wood, whitebeam, three nerved sandwort, procumbent pearlwort, and tway blade.

June 12th

Yesterday I was walking through the amphitheatre,

July 16

July 16

P78CMC60

we saw four thrush's nests, three of them had eggs in, and the fourth had four tiny birds, we also found a hedge-sparrow's nest, containing several young. In a tree we found a tiny wren. On the way up to a rehearsal, we found a tiny baby spotted - flycatcher, he was lying at the bottom of a tree, so we put him back in the nest.

July 3rd

Today we went a very interesting Nature walk. We went towards the two lakes, and made a note of every flower we found, and consequently found several new ones, amongst which were herb bennet, rose bay willow herb, procumbent pearlwort, and woody nightshade. We fished in one of the lakes, and found several interesting "bugs", including one big one, that had two tails.

July 16th

Whilst we were having Nature painting, we notice a moth that had become entangled in a spider's web, in the corners of the window-sill. The spider was going on

P79CMC60

wearing its web, and the moth was nearly suffocated. It looked so pathetic, that we broke the web, and let it fly away.

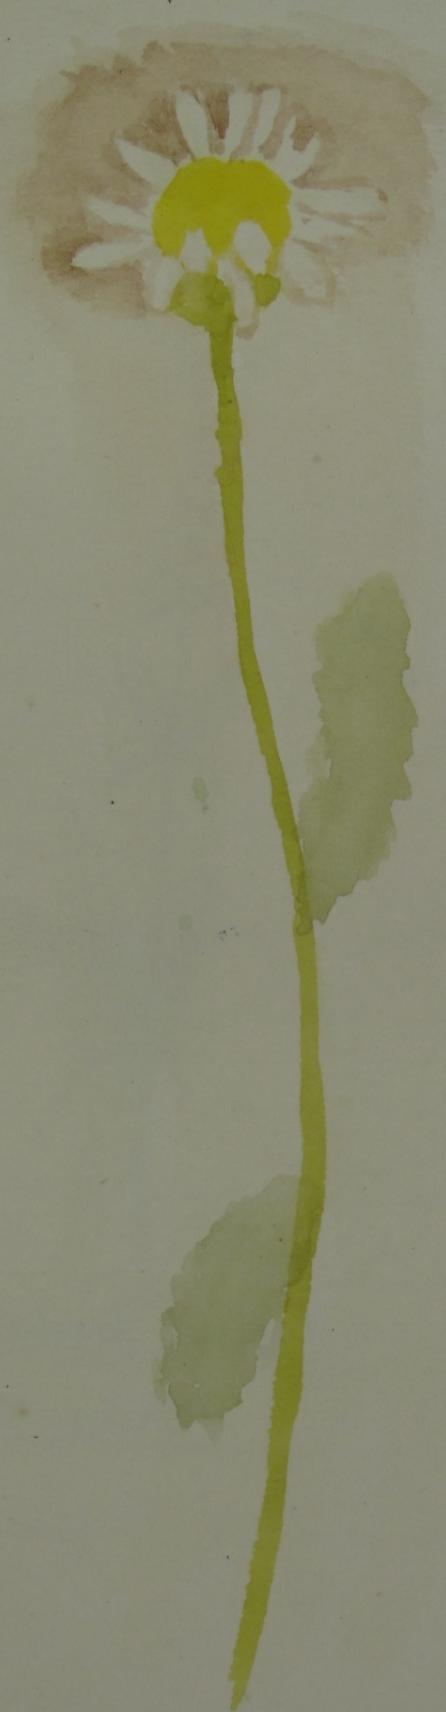

July 23rd

About a week ago Miss Duncan found a Poplar Hawk moth. It layed ^{several} ~~two~~ eggs and last night two of them hatched out into tiny green caterpillars. They both had the characteristic horn on their tails. This morning they were both very lively and crawling all round their box looking for poplar leaves.

July 24th

There are two pigeons that perch outside our dormitory window every morning. They are very pretty, but they make quite a noise with their cooing. They have come regularly now, since the beginning of term.

AUTUMN
TERM

1935

Woody Nightshade
Berries

Oct: 4th

Autumn Term 1935.Oct: 10th:

As we were coming up to the works this morning, we saw a squirrel running - quite slowly - across the games field. He stopped several times, and when we reached the trees, he was still on a bough with us.

Oct: 21st:

This morning we found there had been a heavy frost, - the first this year — when we went up to the works, the gamesfield was still quite white, and shining. Just as we reached the clockroom, we saw another squirrel sitting quite unafraid, in the middle of the road, eating a nut.

Oct: 30th:

Yesterday we went for a long nature walk. We went out of the Sywell gate and then along the road towards Sywell; we turned up past the Vicarage, and came in between the two lakes. It was very windy, and rained most of the time, but even so the leaves looked beautiful, in their different tints. We found clumps of ^{white} dead nettle, still flowering from by the

P85CM660

roadside, but all other flowers are over.

Nov 14th: Today I painted some Larch cones, so we put one cone on the radiator; after about ten minutes one several of the seeds fell out, so I was able to paint one separately.

Dec 4th: As we were going into the dining-room a little mouse rushed out of the passage into the Study.

Dec 10th: We saw a nuthatch on a tree outside the form-room window this morning, his bright colours looked very pretty in the sunlight

The Fish with shining tails.

Spring Term 1936

Jan. 20th When we came back to school the ground was covered with snow, and yesterday some people were skating on the lake, but when we woke up this morning the snow had gone and today has been very windy, but warm and sunny, more like March than January.

Jan. 30th Yesterday we went for a Nature Walk, the weather was mild and damp. We found some pussy-willows, showing both the male and female flowers. We also found beech, ash, and sycamore buds. We saw some bull-finches among the trees and also some green-finches and bluetits. Coming back between the two lakes we saw a man fishing, he had caught several roach, which he was using as bait for larger fish.

Feb. 3rd. On Saturday we went to Bedford. We were on top of the bus so we had a

MC60

P92CM60

100

Willow
Catkins

Feb 4th

beautiful view of the surrounding country. Near Billing and again near Bedford, were huge floods, especially where a river had overflowed its banks.

Feb 10th

Last Friday in guides we had a nature competition, in which we went out in patrols. We went down by the two lakes, we found that the ice was about $\frac{1}{2}$ an inch thick near the edge but that near the centre it was very thin, and a current of water went across from one side to the other.

We found the box was in flower, - the flowers grow in the axile of each leaf, the rhododendron was also coming into bud, the lilac was in bud and we found some alder catkins. Several goldcrests were flitting about in the trees, the goldcrests are the smallest birds in England, they are a soft greeny brown colour, with a touch of yellow and white on the wings, and a very conspicuous golden crest. They have a characteristic mode of flight - flitting from tree to tree. —

P95CM665

We saw several moorhens "walking" down to the lake, when they reached it some of them swam and others flew across the surface. On the way back we saw a flock of wild duck, they always fly in a "V" shaped formation and fly with very quick wing beats.

Feb. 12th

Yesterday we went for a nature-walk, we went out of the Billing Gate, and turned to the right when we reached the cross-roads, we turned to the right across a field, and went round the trespassing woods. The ground was very hard and frosty and there were few flowers to be seen. We passed the old fossil heap, but we could not find any more. We were looking out for red-wings and field-fares, but we didn't see any.

P96 CM660

Willow Catkins

March 2nd

March 3rd

Yesterday we went for a nature walk, we went the same way as on January 30th, across to the Sywell drive, turning off to the right and then to the left through the woods. We watched chaffinches, some which looked very like bullfinches but we decided they were only chaffinches. We listened to the song of a bor bluetit, and tried to write down its song.

March 11th

Yesterday we went for a Nature Walk. We went out between the two lakes and went to the ^{Sywell} woods, on the other side. We found several patches of wild snowdrops and also some extraordinarily extremely large willow catkins. The weather was warm and sunny, and felt like spring! We also saw many lambs frolicking in the fields.

Summer Term.

April 28th

When we were down by the lake we saw a coot's nest with four eggs in it. It is built so that it protrudes right out into the lake but is just above the level of the water.

May 29th.

Yesterday we went for a very interesting nature walk. Going down to the lake we saw a partridge suddenly start away and looking amongst the grass we found a nest with one egg in it. On an oak tree nearby we found some huge oak apples.

We went down as near the water as possible, and found Brooklime, and water cress. Under the landing stage we found lots of little red spiders. We went round to the coot's nest, past hawthorn trees laden with blossom but found no eggs, so they have either flown or else the eggs have been taken.

When we left the nest we saw a huge dragon fly, on a bush, its wings were about two inches across and the length of its body, nearly three. It seemed unable to fly, but perched on our hands and fluttered its wings. We took it with us, for quite a long
